PowerHub

Intelligent Power Automation for Hotels

Seamlessly integrated with MHMS Cloud Front Office. Every check-in, checkout, visit and housekeeping event automatically controls guest-room power — cutting energy waste the moment a room is empty.

25–35%

Room energy savings

< 6 mo

Typical payback

Live monitoring

Purpose-built for hotels, resorts and serviced apartments — multi-property ready.

Stop paying for empty rooms.

Book a live demo with our team — see your property's savings in 30 minutes.

Platform Features

- **Automatic room power control** — power switches ON at check-in and OFF at checkout, driven directly by front-office events. No staff action, no forgotten lights or AC.
- **Timed guest & housekeeping modes** — Visiting, Cleaning, Maintenance and MD sessions get their own countdown; power cuts off automatically when the timer expires.
- **Live Room Chart (Power Matrix)** — a colour-coded map of every room: green = powered, red = off, amber = device unreachable. One glance shows the whole property.
- **Per-control precision** — Light, AC, geyser and any custom circuit are switched independently per room via multi-channel relay controllers.
- **Real-time energy metering** — kWh and cost recorded per session with your tariff — see exactly what each stay, visit or cleaning consumed.
- **Command audit trail** — every command is logged with source (MHMS / UI), process, guest, GRC/bill and delivery status. Full accountability.
- **Multi-property & role-based access** — one dashboard for your whole group, with per-property staff roles and complete tenant isolation.
- **Offline-safe architecture** — relay boxes keep polling through a lightweight site bridge; device health is monitored with automatic offline alerts.

Native MHMS Cloud Integration

PowerHub and MHMS Cloud Front Office work as one system. The moment your front-office team acts, the room responds:

- **Guest context travels with power** — guest name, GRC / bill number and the staff member who acted are stored on every command.
- **Process-aware timers** — MHMS event names map to PowerHub process types, so Visiting and Cleaning cut off automatically while Check-in stays on.
- **Per-property API keys** — each hotel gets its own key; rotate or disable instantly from the dashboard.

Business Benefits

- **Lower electricity bills** — guest-room energy is 40–60% of a hotel's power cost; automation removes the waste from empty and idle rooms.
- **Longer equipment life** — ACs and geysers stop running unattended for hours, reducing wear, breakdowns and AMC costs.
- **Zero dependence on staff discipline** — savings are enforced by the system, on every room, on every shift.
- **Better guest experience** — rooms are powered and ready the moment check-in is completed at the desk.
- **Sustainability & ESG** — measurable kWh reduction supports green certifications and corporate-client requirements.
- **Management visibility** — owners see live occupancy power state, usage reports and cost per room from anywhere.

Return on Investment — 100-Room Hotel (illustrative)

Assumptions: avg. 18 kWh/day per occupied room, 70% occupancy, tariff Rs. 9/kWh, 25% waste eliminated by automation.

Energy consumed by guest rooms	~1,260 kWh / day	~Rs. 3.4 lakh / month
Waste from empty / idle rooms (25%)	~315 kWh / day	~Rs. 85,000 / month
Annual saving with PowerHub	~1.15 lakh kWh	~Rs. 10.2 lakh / year
Typical payback period	—	under 6 months

Figures are indicative; actual savings depend on tariff, occupancy and equipment profile. We prepare a property-specific ROI sheet during the demo.

Why Hotels Choose Microgenn

- **Hospitality-first** — built by the team behind MHMS Cloud, used daily by hotels across India.
- **Fast deployment** — relay controllers + plug-and-play site bridge; property live in days, not months.
- **No rip-and-replace** — works with your existing wiring through compact multi-channel relay boards.
- **Enterprise support** — onboarding, staff training and 24/7 monitoring options included.
